The Walt Disney Company
Disney Experiences Technology
Glendale, California

Dear Disney Experiences Technology Hiring Team,

I'm writing to apply for the Director, AI Enablement & Strategy role within Disney Experiences Technology. For the past six years I've built the exact program this role describes – AI operating models, value dashboards and ROI frameworks, governance, and culture change toward AI-native teams – first at Microsoft for enterprise and Fortune 500 customers, and more recently leading it directly as a Principal Cloud Solution Architect. I'd like to bring that experience to help lead AI augmentation across DXT.

Why Disney. Few organizations operate at the scale and precision Disney does – reconciling deep operational complexity with an obsessive bar for guest and employee experience. That combination is exactly where AI augmentation programs succeed or fail: not on tool adoption, but on whether the underlying workflows, governance, and culture actually change. I want to bring that discipline to an organization where getting it right matters at Disney's scale.

Why this role. My work has centered on the same problem DXT is solving: moving organizations past isolated AI pilots into a real operating model. I've owned AI value dashboards and ROI frameworks that connected initiatives to business outcomes for executive audiences; built agent intake, governance, and ALM processes that let organizations adopt AI safely instead of shutting it down; and led change management for teams learning to work AI-natively, including reducing manual effort by 80% and MTTR by 70% on programs I directly owned. I've also spent real time on the stakeholder side of this work – functioning as a trusted technical advisor to customer CTOs and executive leadership, translating their priorities into sequenced roadmaps their teams could actually execute. Much of this leadership happened without a formal management title behind it: I built trust and technical authority with engineers, architects, and executives through the work itself, which is the kind of credibility I'd bring to leading AI augmentation across DXT's technical teams.

I'd welcome the chance to talk through how this experience maps to DXT's AI augmentation roadmap.

Sincerely,

A handwritten signature in black ink that reads "Frank Sposaro". The signature is written in a cursive, flowing style with a large, prominent "F" and "S".
