PROFILE

Enterprise Solutions Architect with 20+ years spanning software engineering and enterprise solution design, and over a decade architecting large-scale cloud and AI-enabled systems. I design secure, scalable platforms combining AI services, cloud-native infrastructure, and low-code development where appropriate. Known for translating business strategy into executable technical roadmaps, leading executive-facing workshops, and orchestrating cross-functional teams to deliver durable customer outcomes.

EXPERIENCE

Agentic Architect 2025–2026

Professional Services, Microsoft

- Served as principal architect for AWS-to-Azure migration initiatives, defining multi-phase strategies for critical enterprise workloads.
- Authored architecture roadmaps aligning executive priorities with engineering execution, accelerating cloud exit timelines by 30%.
- Designed secure landing zones and governance models ensuring compliance, scalability, and operational consistency.
- Led solution architecture for process digitization using low-code platforms, reducing operational cycle time by up to 60%.
- Established enterprise ALM strategy with CI/CD pipelines, environment isolation, and version control using Azure DevOps.
- Partnered directly with enterprise customers to influence architecture decisions and accelerate adoption of AI-enabled platforms.

Power Platform & Copilot Studio Specialist

2023–2025

Northeast Region, Microsoft

- Automated data ingestion, migrations, and CI/CD pipelines using Azure Functions, cutting manual effort by 80% and accelerating delivery by 40%.
- Led executive and technical workshops to align business objectives with solution architecture and delivery plans.
- Designed optimized data models and analytics solutions improving performance by 30% and reducing decision latency by 25%.
- Integrated third-party services and APIs into enterprise platforms to expand system capabilities and interoperability.
- Defined governance, security, and compliance policies enabling scalable low-code adoption across regulated environments.
- Diagnosed and resolved production issues through root-cause analysis, improving reliability and customer satisfaction.
- Designed and deployed AI-enhanced applications leveraging Python and Azure Cognitive Services, increasing processing accuracy by 25%.
- Implemented monitoring and observability for AI agents using Azure Monitor and Application Insights, reducing MTTR by 70%.

Adjunct Faculty

2023–2025

Computer Science, Florida State University

- Designed and delivered graduate-level coursework in Low-Code Application Development, emphasizing system design, automation, and AI integration.

Power Platform Lead Architect

2020–2023

Northeast Region, Microsoft

- Led enterprise digital transformation initiatives by orchestrating business stakeholders, engineering teams, and platform strategy.
- Facilitated executive workshops to define modernization roadmaps and translated requirements into scalable architectures.

- Delivered success metrics and adoption insights using Power BI and Azure analytics services.
- Migrated legacy systems to governed data platforms with RBAC, security controls, and compliance frameworks.
- Architected and delivered enterprise applications supporting mission-critical operations across multiple industries.
- Built conversational AI agents to support HR, training, and customer self-service use cases.
- Mentored architects and developers, fostering a community of practice around scalable low-code and AI solutions.
- Established ALM and governance standards adopted across multiple enterprise customers.

Cloud Solution Architect, Power Platform Developer 2018–2020
Strategic Accounts, Financial Services, Microsoft

- Led cross-functional teams delivering AI-enabled and cloud-native solutions for strategic enterprise customers.
- Architected cloud solutions aligned to business objectives, regulatory requirements, and long-term scalability.
- Increased recurring revenue by 10% month-over-month following deployment of audit and compliance platforms.
- Partnered with executive stakeholders to solidify business cases and prioritize transformation initiatives.
- Defined product roadmaps from prototype through production, aligning delivery with sales and customer success motions.
- Unified enterprise data using Dataverse, Azure Data Factory, and dataflows to support analytics and automation.
- Accelerated delivery of financial and tax solutions by optimizing agile processes and CI/CD pipelines.

Software Development Engineer 2013–2018
Xbox Store, Microsoft, Redmond, WA

- Developed Python-based telemetry pipelines and executive reporting systems enabling data-driven roadmap decisions.
- Delivered high-impact e-commerce features used by millions, with emphasis on scalability, performance, and accessibility.
- Reduced cross-team dependencies by publishing reusable services and shared components.
- Mentored junior engineers and promoted agile best practices across teams.

Earlier Experience

- *Research Programmer & Tech Lead*, FSU Computer Science (2010–2013)
- *Microsoft Student Partner*, Florida State University (2012–2013)
- *Android Developer*, iMobile3 (2012); *Software Engineer Intern*, Google (2011)
- *EA Campus Rep*, Tri-Sqox (2004–2011); *Software Engineer II*, ARINC (2007)

EDUCATION Florida State University 2004–2015

- Ph.D., M.S., B.S. in Computer Science
- Research in mobile medical monitoring, computer vision, and applied systems.

CURRENT CERTS

COLLEGIATE INSTRUCTOR Course Founder, Primary Instructor 2010–2025

- Low-Code Application Development
- Mobile Programming: Android and Windows Application Development

Teaching Assistant 2007–2010

- C++, Data Structures, Computer Ethics, Web Programming
