PROFILE

Enterprise Solutions Architect with 20+ years across software engineering and cloud architecture, including a decade designing large-scale AI-enabled systems. Specialize in Microsoft Copilot and Copilot Studio governance, secure cloud-native platforms, and low-code adoption at scale — translating business strategy into executable roadmaps through executive workshops and InfoSec partnerships.

EXPERIENCE

Agentic Architect 2025–2026
Professional Services, Microsoft

- Served as principal architect for AWS-to-Azure migration initiatives, defining multi-phase strategies for critical enterprise workloads.
- Authored architecture roadmaps aligning executive priorities with engineering execution, accelerating cloud exit timelines by 30%.
- Designed secure landing zones and governance models ensuring compliance, scalability, and operational consistency.
- Established enterprise ALM strategy with CI/CD pipelines, environment isolation, and version control using Azure DevOps.
- Advised on Microsoft Copilot and Copilot Studio governance — environment strategy, agent intake, and DLP guardrails — to keep enterprise AI adoption safe and auditable.

Azure Architect & Cloud Migration Lead 2025
JM Family, Deerfield Beach

- Led AWS-to-Azure migration for enterprise workloads, partnering with business owners and engineering teams to map products, dependencies, and workflows to target-state Azure services.
- Designed end-to-end cloud architectures spanning compute, networking, identity, and data, translating legacy AWS patterns into secure, scalable Azure equivalents.
- Facilitated discovery sessions with product owners and developers to capture functional requirements, integration points, and non-functional constraints driving migration decisions.
- Drove architecture review and signoff with InfoSec, aligning designs to enterprise security, compliance, and data protection standards prior to deployment.
- Produced detailed architecture diagrams, runbooks, and migration playbooks used by delivery teams to execute cutovers with minimal disruption.
- Authored comprehensive technical documentation covering target-state architecture, control mappings, and operational procedures to support long-term platform ownership.

Power Platform & Copilot Studio Specialist 2023–2025
Northeast Region, Microsoft

- Defined Power Platform and Copilot Studio governance, security, and compliance policies — including environment strategy, DLP, and connector governance — enabling scalable adoption across regulated environments.
- Architected and shipped Copilot Studio agents for enterprise self-service, and coached customer teams on custom agent intake, approval, and ALM patterns.
- Automated data ingestion, migrations, and CI/CD pipelines using Azure Functions, cutting manual effort by 80% and accelerating delivery by 40%.
- Designed optimized data models and analytics solutions improving performance by 30% and reducing decision latency by 25%.
- Designed and deployed AI-enhanced applications leveraging Python and Azure Cognitive Services, increasing processing accuracy by 25%.
- Implemented monitoring and observability for AI agents using Azure Monitor and Application Insights, reducing MTTR by 70%.

Power Platform & Copilot Consultant 2023
JM Family, Deerfield Beach

- Established Power Platform and Microsoft Copilot governance model spanning environment strategy, security group management, connector governance, and DEV/UAT/PROD

lifecycle management.

- Provisioned governed tenant environments enabling AI engineers to build safely, while narrowing platform options for non-technical users to reduce shadow IT and platform risk.
- Designed intake and approval processes for custom Copilot agents, including requestor validation and controls redirecting M365 “Create Agent” traffic away from default environments.
- Partnered with InfoSec and business stakeholders on governance objectives, guardrails, and platform direction for Copilot and Power Platform adoption.
- Led client-facing strategy sessions translating business needs into architecture roadmaps, governance frameworks, and canary questions used as acceptance criteria.
- Mentored junior AI engineering resources on discovery, ambiguous problem framing, and translating business objectives into actionable engineering requirements.

Power Platform Lead Architect

2020–2023

Northeast Region, Microsoft

- Led enterprise digital transformation initiatives, orchestrating business stakeholders, engineering teams, and platform strategy across multiple industries.
- Migrated legacy systems to governed data platforms with RBAC, security controls, and compliance frameworks.
- Architected and delivered enterprise applications supporting mission-critical operations.
- Built conversational AI agents to support HR, training, and customer self-service use cases.
- Established ALM and governance standards adopted across multiple enterprise customers.

Cloud Solution Architect, Power Platform Developer

2018–2020

Strategic Accounts, Financial Services, Microsoft

- Architected cloud solutions aligned to business objectives, regulatory requirements, and long-term scalability for strategic enterprise customers.
- Increased recurring revenue by 10% month-over-month following deployment of audit and compliance platforms.
- Partnered with executive stakeholders to solidify business cases and prioritize transformation initiatives.
- Unified enterprise data using Dataverse, Azure Data Factory, and dataflows to support analytics and automation.

Software Development Engineer

2013–2018

Xbox Store, Microsoft, Redmond, WA

- Developed Python-based telemetry pipelines and executive reporting systems enabling data-driven roadmap decisions.
- Delivered high-impact e-commerce features used by millions, with emphasis on scalability, performance, and accessibility.

Earlier Experience

- *Research Programmer & Tech Lead*, FSU Computer Science (2010–2013)
- *Microsoft Student Partner*, Florida State University (2012–2013)
- *Android Developer*, iMobile3 (2012); *Software Engineer Intern*, Google (2011)
- *EA Campus Rep*, Tri-Sqox (2004–2011); *Software Engineer II*, ARINC (2007)

EDUCATION

Florida State University

2004–2015

- Ph.D., M.S., B.S. in Computer Science
- Research in mobile medical monitoring, computer vision, and applied systems.

CERTS

COLLEGIATE INSTRUCTOR

Adjunct Faculty & Course Founder, Florida State University

2010–2025

- Graduate-level Low-Code Application Development; Mobile Programming (Android, Windows).
