To the Android Team:

I'd like to pursue a career with you with opportunity for growth.

Growing up, I was interested in mobile devices. I always had the newest "smartphone," even as a child. This lead me to study computer science as a software engineer with a special focus on mobile applications. Wanting to share my passion with others, I developed mobile programming courses at Florida State University geared towards application development for Windows 8, Windows Phone 8, and Android. These courses were so popular, they were adopted into the curriculum.

My research is focused on using commerical devices for medical purposes; such as using smartphones for fall detection or the Kinect for vision training. I have published several papers in this area; all of which have lead to very exciting conversations about the future of technology. However, it's time for me to leave academia because I need the chance to shape this future.

I've had experiences with several companies of different shapes and sizes and the move to a big company feels right. I can learn from experienced minds while directly impacting thousands in a positive way. I consider myself very ambitious and outgoing. I have no problems learning how things work and pushing the boundary. I'm seeking a company that allows me to put this energy to good use.

Thank you for taking the time to learn more about me as I have spent my entire life learning about you.

Sincerely yours,

A handwritten signature in black ink that reads "Frank Sposaro". The signature is written in a cursive, flowing style with a large, stylized 'F' and 'S'.
