Michael D. Devine, Ph.D.
Executive Director, FL CURED, College of Medicine, Florida State University
Researcher, Office of Intellectual Property and Commercialization, Florida State University
mdevine@fsu.edu

Dear Dr. Devine:

I would like to apply for admittance into the fall entrepreneur class. I learned about this class in an email from Professor Dave Whalley and discussed the opening with Professor Gary Tyson.

Our research into mobile applications is a great target for commercialization. We program on the Android Platform which is currently deployed on the T-Mobile network. An useful application can be rapidly designed for a variety of areas such as social networking, medical, entertainment, or realtime systems. Currently, we have published a medical application as a sensible fall monitoring service. Upon completion of project we have the ability to instantly make application readily available to thousands of users via Android marketplace. Users can then download (price optional) and provide application feedback. This realistically allows us to complete a full software lifecycle in the time span of a single semester. Programming for the iPhone environment is also a viable option.

I am available anytime this week if you would like to have a meeting on campus. Please feel free to email me at frank.sposaro@gmail.com if there is any additional information or questions you may have. Thank you for taking the time to review my resume. I strongly feel I am a prime candidate for this position.

Sincerely yours,

Frank A. Sposaro
