Air BnB
8th and Olive
Seattle, WA

To the Air BnB Team:

I'd like learn about your vision and culture in hopes to discover a career oppertunity

I am an engineer at heart. Growing up, I was always interested in how the world works. My curious nature, along with having the newest toys and some dumb luck, started my relationship with computer science. Loving the instant gratification of UI programming, I took a particular interest in mobile application. Wanting to share my passion with others, I developed mobile programming courses at Florida State University. These courses were so popular, they were adopted into the curriculum.

With that momentum, I decided to accept the challenge to impact the world. I researched creating apps and devices to solve real medical problems. That landed me at Microsoft where I've been helping build a massive E-Commerce bussiness with a special focus on accessibility. However, I feel like I have unfinished bussiness and want to get back to my roots and continue to improve the quality of life for everyone.

One of my greatest assets is my ability to evangelize. However, in order to do that I must believe in what I'm doing. This motivated me to compose a wants list to help the transision. These are professional, cultural, and personal items that Im looking for in order to take that leap of faith.

- Career growth and leadership opportunities
 - My path thus far has been driven with checkboxes and flow charts. When the rules of the game and expectations are clearly laid out, I devote myself to crossing the required items off my list. I want a company that is transparent about what it is looking for and what it values. I dont like guessing at what my manager/team values. While teaching I had many leadership opportunities. Ive had many students reach out and thank me for helping them out. Im missing that and would love those chances to help people on a personal and professional level again.
- Chance to work with new technologies
 - I am a learner. No matter the context, I am an engineer at heart and feel the constant urge to understand how things are made. Once I sink my teeth into a problem I become obsessive and often times lose sleep because I just have to figure it out.
- Make a real world impact
 - The bulk of my history has been in using technology to solve real world problems. I get a lot of joy in knowing that what Im doing really matters. I want to use technology to actually improve the quality of life for individuals, not just make money for The Man.
- Communication Path Up the Chain

- I prefer a smaller, more intimate team. I relate managers and higher-ups to leaders and I need to believe in the leadership. Having a line of communication with leadership really helps me trust in their vision. Once that happens, I will do any and everything I can for them. I like to feel important and I strive to not let them down. That being said, a team where the big boss at least knows my name is a good start.
- Experience to become a better engineer
 - I need my team to have a process for getting work done and stick to it. I've seen too many Cowboys and that unpredictability worries me. I am constantly learning how to improve my output through better planning and coordination and want an environment that helps me achieve that.

Thank you for taking the time to learn about me today as I hope together we can build a brighter tomorrow.

Sincerely yours,

A handwritten signature in black ink that reads "Frank Sposaro". The script is fluid and cursive, with the first letters of "Frank" and "Sposaro" being capitalized and prominent.
