To the Android Team:

I would like the opportunity to work with you this summer.

Currently I am a grad student in the Computer Science Department at Florida State University under Dr. Gary Tyson. I have been interested in mobile devices and bought a G1 as soon as I could. I fell in love with Android instantly. Wanting to share my passion with the rest of the students I developed a mobile programming course at FSU to teach others how to make Android applications. Since then, the course has been so popular that it is actually being adopted in our curriculum and asked to be taught every semester.

My research has also been focused around using commercial Android powered devices for medical purposes. I have published several papers in this area; all of which have been well received by the community. Mainly the focus was on application development, but I have also compiled Android from source in order to make custom platforms.

In my spare time I enjoy building applications for various companies, including our school newspaper, entering design contests in order to get my hands on a new tablet, and helping other students with their Android projects. I also have a strong interest in Google TV and have been impatiently waiting for the SDK to be released.

Thank you for taking the time to learn more about me as I have spent my entire college career learning about Android.

Sincerely yours,

Frank Sposaro
