To the Team:

I'd like learn about your vision and culture in hopes to discover a career oppertunity

Growing up, I was interested in mobile devices. I always had the newest "smartphone," even as a child. This lead me to study computer science as a software engineer with a special focus on mobile applications. Wanting to share my passion with others, I developed mobile programming courses at Florida State University geared towards application development for Windows 8, Windows Phone 8, and Android. These courses were so popular, they were adopted into the curriculum.

My research is focused on using commerical devices for medical purposes; such as using smartphones for fall detection or the Kinect for vision training. I have published several papers in this area; all of which have lead to very exciting conversations about the future of technology. That landed me at Microsoft where I've been helping build a massive E-Commerce bussiness. However, I am wanting to get back to my roots and improve the quality of life for people.

One of my greatest assets is my ability to evangelize what I believe in. Once Im on a team I love, Im all in with the team. Because of this, I have decided to compose a wants list. These are professional, cultural, and personal items that Im looking for in order to feel secure enough to make the jump and quickly believe in what Im fighting for.

- Career growth and leadership opportunities
 - My path thus far has been driven with checkboxes and flow charts. When the rules of the game and expectations are clearly laid out, I devote myself to crossing the required items off my list. I want a company that is transparent about what it is looking for and what it values. I dont like guessing at what my manager/team values. While teaching I had many leadership opportunities. Ive had many students reach out and thank me for helping them out. Im missing that and would love those chances to help people on a personal and professional level again.
- Chance to work with new technologies
 - I am a learner. No matter the context, I am an engineer at heart and feel the constant urge to understand how things are made. Once I sink my teeth into a problem I become obsessive and often times lose sleep because I just have to figure it out.
- Make a real world impact

- The bulk of my history has been in using technology to solve real world problems. I get a lot of joy in knowing that what I'm doing really matters. I want to use technology to actually improve the quality of life for individuals, not just make money for The Man.
- Communication Path Up the Chain
 - I prefer a smaller, more intimate team. I relate managers and higher-ups to leaders and I need to believe in the leadership. Having a line of communication with leadership really helps me trust in their vision. Once that happens, I will do any and everything I can for them. I like to feel important and I strive to not let them down. That being said, a team where the big boss at least knows my name is a good start.
- Experience to become a better engineer
 - I need my team to have a process for getting work done and stick to it. I've seen too many Cowboys and that unpredictability worries me. I am constantly learning how to improve my output through better planning and coordination and want an environment that helps me achieve that.

Thank you for taking the time to learn about me today as I hope together we can build a brighter tomorrow.

Sincerely yours,

A handwritten signature in black ink that reads "Frank Sposaro". The script is fluid and cursive, with the first letters of "Frank" and "Sposaro" being capitalized and prominent.
