The Walt Disney Company
Disney Experiences Technology
Orlando, Florida

Dear Disney Experiences Technology Hiring Team,

I'm writing to apply for the Director, AI Enablement & Strategy role within Disney Experiences Technology. For the past six years I've built the exact program this role describes – AI operating models, value dashboards and ROI frameworks, governance, and culture change toward AI-native teams – first at Microsoft for enterprise and Fortune 500 customers, and more recently leading it directly as a Principal Cloud Solution Architect. I'd like to bring that experience to help lead AI augmentation across DXT.

Why Disney. I grew up a Disney kid in Florida, long before I had a name for it – my family held season passes, and one stretch we spent 52 straight days on Disney property while camping nearby. That feeling never left. I proposed to my wife at Cinderella's wishing well, and we later moved back from Redmond, Washington to Florida in part to be closer to family and to the parks. Everything changed again in 2023: holding my daughter in her Winnie the Pooh nursery, I broke down in tears and told my wife, let's renew our passes. Watching her talk to Mickey like an old friend and sing with the princesses is the closest thing I have to a definition of magic. As I've gotten older, I've come to prioritize memories and family time over everything – and few things have made their value to me clearer than watching my daughter experience Disney exactly the way I once did.

Why this role. My work has centered on the same problem DXT is solving: moving organizations past isolated AI pilots into a real operating model. I've owned AI value dashboards and ROI frameworks connecting initiatives to business outcomes, built agent intake and governance processes that let organizations adopt AI safely, and led change management for teams learning to work AI-natively – reducing manual effort by 80% and MTTR by 70% on programs I directly owned. I've also functioned as a trusted technical advisor to customer CTOs and executive leadership, translating their priorities into roadmaps their teams could execute – often without a formal management title behind it, building trust and technical authority through the work itself. That's the kind of credibility I'd bring to leading AI augmentation across DXT's technical teams.

I'd welcome the chance to talk through how this experience maps to DXT's AI augmentation roadmap.

Sincerely,

Dr. Frank Sposaro
